Work Experience

Telekom Slovenije

Ljubljana, Slovenia

DATA SCIENTIST

2020 - 2022

- Developed ML models predicting the probability of customers leaving the company - Churn models.
- Clustering of IPTV users for the purpose of segmentation.

Sportradar

Ljubljana, Slovenia

MACHINE LEARNING ENGINEER

2023 - Now

- Synthesizing real-time market data and betting liabilities to automate optimal odds compilation.
- Implementing player profiling models enabling automated account limits and fraud detection.
- Engineering automated trading triggers to monitor liabilities and manage house exposure.

Education

Faculty of Computer Science and Informatics - University of Ljubljana

Ljubljana, Slovenia

M. SC. IN DATA SCIENCE AND COMPUTER SCIENCE

Oct. 2020 - Ongoing

- Data Science master program is part of **DataScience@UL-FRI** and it focuses on data analysis, statistics and machine learning.

Faculty of Computer Science and Informatics - University of Ljubljana

Ljubljana, Slovenia

B. SC. IN COMPUTER SCIENCE

Oct. 2017 - Sep. 2020

Skills

Programming	Regular usage of Python, R, Java and SQL.
Machine learning	Knowledge of various ML methods. Flink. Kafka.
Environments	Comfortable in Mac OS and Linux (Ubuntu).
Languages	English, Slovenian, Bosnian, German (basic).

Publications

Analysis of tourist movements with the help of Geocaching game

DIPLOMA THESIS

2020

- Geocaching is an outdoor game, in which players search for hidden caches at outdoor locations with the help of website and mobile application. In my diploma thesis I used web scraping to collect the data that users enter into the application and then analyzed the collected data.

Analysis of home advantage in sports

MASTER THESIS

2023

- In my master thesis addressed home advantage in professional basketball and football leagues, focusing on five top-level leagues in each sport. The main goal was to quantify home advantage and compare it between the leagues.

Featured projects

Basketball and Football dataset

2022

- Collection of high-granularity data of basketball and football matches that were obtained using web scraping.

Clustering web users based on mouse movement

2021

- The objection was to classify web users into groups by performing clustering on their mouse movement data.

Predicting Bundesliga matches outcome

2020

- Collected data of German Bundesliga matches and used it to build ML models. The goal was to predict the outcomes of the matches by creating a classification problem of three classes.
